

... The Scott's Difference.

Osmocôte®

Every **Osmocôte** prill consists of a water soluble nutrient granule, coated with a thin sem-permeable resin. Water vapour penetrates the granule and dissolves the nutrients. The coating controls the release according to changes in soil temperature. More nutrients are released in warmer months when the plant is growing and less in cooler, inactive months.

K-1140	OSMOCOTE AZALEAS CAMELLIAS & RHODODENDRONS	500GM
